                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                NOTE: This is a 'working draft' sequence. It currently consists of 11 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  as soon as it is available and the accession number will be preserved.

                                                                                      AAZ21481 to AAZ21495 represent fragments of the human sensory neurone specific 2a (SNS-2a) nucleotide sequence. SNS-2a is a sodium channel protein. SNS-2a can be used in a method for the identification of a modulator of a sodium channel, and for assaying for compounds which modulate sodium flux. The sodium channel modulators can be used in a
                                                                                                                                                                                                                                                                                                                                                                                                                    Sensory neurone specific 2a; SNS-2a; sodium channel protein; pain; voltage gated; hypersensitivity; ss.

```

This is the nucleotide sequence of a partial cDNA clone which codes for a CC portion (see AAY06596) of human NaN, a previously unidentified voltage CC gated sodium channel protein that is preferentially expressed in dorsal CC root ganglia (DRG) or trigeminal ganglia, and which produces a TTX-R CC sodium current. The NaN channel cDNA was obtained from human DRG tissue CC DNA by PCR amplification (see also AAX87620-22). Rat, mouse and human CC UNAN nucleic acids (see AAX97600-02) and polypeptides (see AAX06596-98) CC are provided. The invention also includes expression vectors and CC transformed host cells, methods for identifying tissues and cells that CC express NaN, methods for identifying agents that modulate NaN channel CC activity or NaN channel mRNA transcription or translation, and a method CC using such agents to treat acute or chronic pain, paraesthesia and CC hyperexcitability phenomena. The preferential expression of NaN in CC sensory DRG and trigeminal neurons provides a target for selectively CC modifying the behaviour of these nerve cells while not affecting other correctly in the brain and spinal cord. The gene is named SCN11a Claim 1; Fig 8A1-2; 91pp; English.

Sequence 3638 BP; 1027 A, 793 Ç 801 G 1016 T; 0 ₽, 1 Other;

The present sequence is that of a partial cDNA for a novel human CCC tetrodotoxin resistant sodium channel, termed NaN (see ARB20125). The CC cDNA was isolated from a human dorsal root ganglia tissue cDNA library by CC PCR amplification (see also AAF30122-23). A full-length seqvence is given contained protein family and produces a TTX-R sodium current. Such channels cunderlie the generation and propagation of impulses in excitable cells cunderlie the generation and propagation of impulses in extitable cells cannot neurons and muscle fibres. Preferential expression of NaN on cells sensory neurons innervating the body (dorsal root ganglia) and the face cells trigeminal ganglia), but not on other neurons, makes it a very useful target for diagnostic and/or therapeutic uses in relation to acute and/or cronic pain pathologies. A claimed method of treating pain, paraesthesia cand/or hyperexcitability phenomena in a human or animal subject involves administering an agent that alters sodium current flow through NaN concerned disparent to trigeminal neurons. NaN nucleic acids are used in centerapy to correct disparders associated with decreased sodium curression or (antisense) to down-regulate NaN expression, in the channel expression or (antisense) to down-regulate NaN expression, in the combinant production of NaN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

                                          The invention comprises the amino acid and coding sequence of three sodium channel subunits from the human nervous system (SCN12A, SCN12A-s and SCN8A). The SCN12A/SCN12A-s gene is found on chromosome 3p23-21.3 and the SCN8A gene is found on chromosome 12q13.1. The sodium ion channel subunit proteins are useful in studying physiological mechanisms relating to excitatory cells and in drug development. The sodium ion channel subunit proteins are useful for treating diseases such as familial subunit proteins are useful for treating diseases such as familial hyperglycaemia, QT extending syndrome type 3 and motor endplate diseases. The present cDNA sequence encodes the human SCN12A-s sodium channel
                                                                                                                                                                                                                                     Sodium channel alpha subunits SCN12A and SCN8A of human nervous system together with splicing variants, useful in studying physiological mechanism relating to excitatory cells and in drug development.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Homo

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ঠ
                       The present sequence is that of cDNA encoding a novel human tetrodotoxin CC resistant sodium channel, termed NaN (see AAB20121). The cDNA was CC isolated from a human dorsal root ganglia tissue cDNA library by PCR cmplification (see also AAF30122-23). NaN belongs to the a-subunit voltage-gated sodium channel protein family and produces a TTX-R sodium courrent. Such channels underlie the generation and propagation of CC impulses in excitable cells such as neurons and muscle fibres. TTX-R sodium CC (dorsal root ganglia) and the face (trigeminal ganglia), but not on other neurons, makes it a very useful target for diagnostic and/or therapeutic CC uses in relation to acute and/or chronic pain pathologies. A claimed CC method of treating pain, paraesthesia and/or hyperexcitability phenomena cin a human or animal subject involves administering an agent that alters codium current flow through NaN channels, or which modulates codium current flow through NaN mRNA, in dorsal root ganglia or trigeminal neurons. NaN nucleic acids are used in gene therapy to correct CC isorders associated with decreased sodium channel expression or (antisense) to down-regulate NaN expression, in the diagnosis of disease, cc and in the recombinant production of NaN polypeptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Best Local Si

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   δ
The present invention describes an expression vector comprising a nucleic card sequence that encodes a mammalian Na v 1.9 sodium channel protein or CC its fragment, and producing a sodium current when transfected in a cell. Also described: (1) a recombinant cell comprising the plasmid selected CC from prNaN, pCMV-rNaN-GFP, pLG338XM-rNaN and the plasmid described above; CC (2) a method of making a cell or cell line that produces a Na v 1.9 CC sodium channel-dependent sodium current by: (a) providing a cell that has been transfected with the expression vector; and (b) culturing the cell cunder conditions that allow expression vector; and (b) culturing the cell comproduce a sodium current into the transfected cell; (3) a method of CC exposing the cell or cell line produced by the method to the agent; and CC (b) measuring sodium current following exposure to the agent, where an CC comprising the level of sodium current in a cell by: (a) calteration in the level of sodium current in a cell; and (4) a recombinant ccell comprising the expression vector. The expression vectors are useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

The present sequence encodes a human Na v 1.9 sodium channel protein, which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; gene; ss; sodium channel subunit; SCN12A; SCN12A-s; SCN2A; human nervous system; chromosome 3p23-21.3; excitatory cell; drug development; familial hyperglycaemia; QT extending syndrome type 3;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   0
```

The invention comprises the amino acid and coding sequence of three sodium channel subunits from the human nervous system (SCN12A, SCN12A-s and SCN8A). The SCN12A/SCN12A-s gene is found on chromosome 3p23-21.3 and the SCN8A gene is found on chromosome 12q3.1. The sodium ion channel subunit proteins are useful in studying physiological mechanisms relating to excitatory cells and in drug development. The sodium ion channel subunit proteins are useful for treating diseases such as familial hyperglycaemia, QT extending syndrome type 3 and motor endplate diseases. The present cDNA sequence encodes the human SCN12A sodium channel subunit

Sodium channel alpha subunits SCN12A and SCN8A of human nervous s together with splicing variants, useful in studying physiological mechanism relating to excitatory cells and in drug development.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches
                            This is the nucleotide sequence of an isolated nucleic acid which encodes the mouse NaN channel (see AAY06597), a previously unidentified voltage gated sodium channel protein that is preferentially expressed in dorsal root ganglia (DRG) or trigeminal ganglia, and which produces a TTX-R sodium current. The NaN channel cDNA was obtained from mouse trigeminal ganglia cDNA by PCR amplification using rat NaN-based primers (see
                                                                                                                                                                                                                                                                                                New isolated nucleic acids encoding sodium channels, used to develop products for treating acute or chronic pain or hyperexcitability
                                                                                                                                                                                                                                                                                                                                                                                                                                                             Dib-Hajj S,

The preferential expression of NaN in sensory DRG and trigeminal neurons provides a target for selectively modifying the behaviour of these nerve cells while not affecting other nerve cells in the brain and spinal cord. The gene encoding NaN has been named Scnlla
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sodium channel; NaN; Scnlla; mouse; tetrodotoxin resistant; paraesthesia; hyperexcitability; analgesic; vaccine; gene t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         and polypeptides (see AAY06596-98) are provided. The invention also includes expression vectors and transformed host cells, methods for identifying tissues and cells that express NAN, methods for identifying agents that modulate NAN channel activity or NAN channel mRNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               polyA_site

NaN belongs to the a-subunit voltage-gated sodium channel protein family and produces a TTX-R sodium current. Such channels underlie the generation and propagation of impulses in excitable cells such as neurons and muscle fibres. Preferential expression of NaN on sensory neurons innervating the body (dorsal root ganglia) and the face (trigeminal ganglia), but not on other neurons, makes it a very useful the protein and the face of the sensory neurons and the face of the sensory neurons 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 gene therapy to correct disorders associated with decreased sodium channel expression or (antisense) to down-regulate NaN expression, diagnosis of disease, and in the recombinant production of NaN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                target for diagnostic and/or therapeutic uses in relation to acute and/or chronic pain pathologies. A claimed method of treating pain, paraesthesia and/or hyperexcitability phenomena in a human or animal subject involves
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence is that of cDNA encoding a novel mouse tetrodotoxin resistant sodium channel, termed NaN (see AAB20124). The cDNA was isolated from trigeminal ganglia cDNA using primers (see AAF30100-21) based on rat NaN sequences. Mouse NaN shows 68% similarity to human NaN (see AAB20121). The gene encoding NaN, termed Scnlla, is located on mouse
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              administering an agent that alters sodium current flow through NaN channels, or which modulates transcription or translation of NaN mRNA, indorsal root ganglia or trigeminal neurons.                                                                                                                                                                                                                                                                                                                                                                   RESULT 11
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   competitions that allow expression vector; and (b) culturing the cell conder conditions that allow expression of Na v 1.9 sodium channel protein conditions that allow expression of Na v 1.9 sodium channel protein conditions that allow expression of Na v 1.9 sodium channel protein conditions that allow expression of Na v 1.9 sodium channel protein conditions a sodium current into the transfected cell; (3) a method of conditions current into the area of conditions current in a cell by: (a) capable of modulating sodium current in a cell; and (4) a recombinant comprising the expression vector. The expression vectors are useful conditions and protein levels, and for producing sodium channel at the mRNA and protein levels, and for producing sodium channel currents characteristic of native currents in dorsal root ganglion neurons. The present sequence encodes a mouse Na v 1.9 sodium channel protein, which consider the exemplification of the Na v 1.9 sodium channel protein, which consider the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes an expression vector comprising a nucleic acid sequence that encodes a mammalian Na v 1.9 sodium channel protein or its fragment, and producing a sodium current when transfected in a cell. Also described: (1) a recombinant cell comprising the plasmid selected from prNaN, pCMV-rNaN-GFP, pLG338XM-rNaN and the plasmid described above; (2) a method of making a cell or cell line that produces a Na v 1.9 sodium channel-dependent sodium current by: (a) providing a cell that has been transfected with the expression vector; and (b) culturing the cell under conditions that allow expression of Na v 1.9 sodium channel protein to produce a sodium current into the transfected cell; (3) a method of exposing the cell or cell line produced by the method to the agent; and (b) massuring sodium current following exposure to the agent; and capable of modulating sodium current is indicative of an agent capable of modulating sodium current is indicative of an agent capable of modulating sodium current is indicative are useful
                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   cell comprising the expression vector. The expression vectors are useful for the stable cloning and expression of the Na v 1.9 sodium channel at the mRNA and protein levels, and for producing sodium channel currents characteristic of native currents in dorsal root ganglion neurons. The present sequence encodes a rat Na v 1.9 sodium channel protein, which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 5298 BP; 1293 A; 1327 C; 1303 G; 1375 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence encodes a type 5 sodium channel protein designated PN5. The protein is a sodium ion channel of the nervous system, and is highly expressed in plexiform and dorsal root ganglia. The protein can be used to identify inhibitors of sodium channel proteins that are resistant to tetrodocoxin (TTX). The inhibitors are potentially useful for treating epilepsy, stroke, diabetic neuropathy, traumatic injuries, AIDS-related neuropathy, and especially neuropathy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Type 5 sodium channel; PN5; nervous system; plexiform; dorsal root ganglia; tetrodotoxin; TTX; epilepsy; stroke; diabetic neuropathy; traumatic injury; AIDS-related neuropathy; neuropathic pain; migraine; headache; ss.

The invention also includes expression vectors and transformed host cells, methods for identifying tissues and cells that express NAN, methods for identifying agents that modulate NAN channel activity or NAN channel mRNA transcription or translation, and a method for using such agents to treat acute or chronic pain, paraesthesia and hyperexcitability phenomena. The preferential expression of NAN in sensory DRG and trigeminal neurons provides a target for selectively modifying the behaviour of these nerve cells while not affecting other nerve cells in the brain and spinal cord. The NAN gene has been named

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This is the nucleotide sequence of an isolated nucleic acid which encodes the rat NaN channel (see AAY06596), a previously unidentified voltage gated sodium channel protein that is preferentially expressed in dorsal root ganglia (DRG) or trigeminal ganglia, and which produces a TTX-R sodium current. The NaN channel cDNA was obtained from Sprague-Dawley rat DRG cDNA by PCR and RACE amplification (see also AAX87603-17). Rat, mouse
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated nucleic acids encoding sodium channels, used to develop products for treating acute or chronic pain or hyperexcitability

Nucleic acid molecules encoding human tetrodotoxin resistant sodium channels, useful for preventing, diagnosing and treating pain, paraesthesia and/or hyperexcitability phenomena.

Example 1; Fig 1; 162pp; English.

CC isolated from a dorsal root ganglia tissue cDNA library by PCR complification using generic primers (from conserved resions of a-subunit conditions of a subunit condition of a subunit conditions of a subunit condition of a subunit conditions of a subunit conditions of a subunit condition of a subunit conditions of a subunit condi The present sequence is that of cDNA encoding a novel rat tetrodotoxin resistant sodium channel, termed NaN (see AAB20122). The cDNA was

Sequence 5875 BP; 1455 A; 1466 C; 1434 G; 1518 T; 0 U; 2 Other;

SNS-2a is a sodium channel protein. SNS-2a can be used in a method for the identification of a modulator of a sodium channel, and for assaying for compounds which modulate sodium flux. The sodium channel modulators can be used in a medicament for the treatment of pain or hypersensitivity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Grose pT, Hick CA,

Sequence 6 Application PC/TUS0019342

CENERAL INFORMATION:

APPLICANT: Vale University

APPLICANT: Dib-Hajj, Sulayman

APPLICANT: Dib-Hajj, Sulayman

APPLICANT: Waxman, Stephen G.

TITLE OF INVENTION: Modulation of Sodium Channels in Dorsal Root Ganglia

FILE REFERENCE: 44574-504-02-W0

CURRENT APPLICATION NUMBER: PCT/US00/19342

CURRENT APPLICATION NUMBER: PCT/US00/19342

CURRENT APPLICATION NUMBER: US 09/354,147

PRIOR FILING DATE: 1999-07-16

NUMBER OF SEQ ID NOS: 44

SOFTWARE: Patentin Ver. 2.1

SEQ ID NO 6

LENGTH: 3701

TYPE: DNA
ORGANISM: Homo sapiens
FEATURE:
NAME/KEY: CDS
LOCATION: (1)..(3699)

COTHER INFORMATION: partial human NaN cDNA sequence
NAME/KEY: unsure
LOCATION: (922)

COTHER INFORMATION: y = c or t

     d. No. is the number of results predicted by chance to have a re greater than or equal to the score of the result being printed, is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                     31.
